Computing Science Technical report No. 145

A Permuted Index for TEX and LATEX

Bill Cheswick
ches@research.att.com

Last revision: 12 August 1991

Contents

1 Introduction **3**

2 Permuted Index **5**

3 Primitive and Plain TEX commands **95**

4 LATEX Commands **107**

Chapter 1

Introduction

This Index is designed to help TEX and LATEX users find the right command among the one thousand-odd commands documented. It is a permuted, or keyword-in-context index. Each command appears under each significant keyword in its definition. For example, `\eject` has the following definition:

```
force a page break
```

The following two entries appear in the Index, alphabetized by the keywords "page" and "break":

force a page break. ..... \eject P
force a page break. ..... \eject P

The superscript "P" at the end of the line means this is defined in the plain TEX macros. The full list is:

*	TEX primitive
(none)	plain TEX
L	LATEX command
3	new TEX version 3 command

If a definition is too long to fit on one side of a definition, it is wrapped around. The command definitions appear after the permuted index. There are two sections, one for TEX primitives and plain TEX, and the other for LATEX commands.

There may be some difficulty thinking of the right keyword used in a definition. I have tried to be consistent. Here are a few words I chose (in bold) and some likely synonyms:

create: make

define: create, initialize, set

select, construct: use

space: distance, glue, separation

test: if

The Proceedings of the summer 1989 TEX Users Group meeting contain a description of how this Index was prepared. The Proceedings were published in the *TUGboat* 10, no. 4.

I would like to thank Barbara Beeton, Michael Downes, John Hobby, Howard Trickey, and many others for definitions and suggestions. Doug McIlroy had some helpful suggestions about editing the Index. I'd also like to thank my wife Lorette, who endured my discovery of how much work an index requires.

add a box to the vertical list shifted left. .. \moveleft*
add a box to the vertical list shifted right. \moveright*
or tabular environment. add extra space before a column in array \extracolsepL
add extra vertical space. ..... \addvspaceL
add footnote to title page. ..... \thanksL
add horizontal space. ..... \hskip*
un-box an hbox and add it to the horizontal list. ..... \unhbox*
un-box a copy of an hbox and add it to the horizontal list. ..... \unhcopy*
un-box a vbox and add it to the vertical list. ..... \unvbox*
un-box a copy of a vbox and add it to the vertical list. ..... \unvcopy*
tables. add text to table contents, figures, or \addtocontentsL
add vertical space. ..... \vskip*
paragraph. amount added to badness of every line in a ..... \linepenalty*
remove a kern just added to the current list. ..... \unkern*
remove a penalty just added to the current list. ..... \unpenalty*
remove a skip just added to the current list. ..... \unskip*
extra space added to top of page. ..... \topmarginL
additional authors on title page. ..... \andL
between lines. additional penalty for page break \interlinepenalty*
table. adds an entry to the specified list or \addcontentslineL
demerits for adjacent incompatible lines. ..... \adjdemerits*
advance \pageno by one. ..... \advancepageno
ligature digraph symbol ae (æ). ..... \ae
ligature digraph symbol capital AE (Æ). ..... \AE
penalty for page break just after a display. ..... \postdisplaypenalty*
permit a line break after a slash. ..... \slash
penalty for line break after binary operation. ..... \binoppenalty*
penalty for line break after discretionary hyphen. ..... \hyphenpenalty*
pause after each line is read from a file. ..... \pausing*
tokens to insert after every \cr or nonredundant \crcr. .... \everycr*
penalty for line break after explicit hyphen. ..... \exhyphenpenalty*
penalty if page break after first line of paragraph. ..... \clubpenalty*
create end-of-sentence space after following punctuation. ..... \@L
penalty if page break after hyphenated line. ..... \brokenpenalty*
badness tolerance after hyphenation. ..... \tolerance*
a word. minimum number of characters after hyphenation at the end of \righthyphenposition3
place superscripts and subscripts after math operators. ..... \nolimits*
penalty for line break after math relation. ..... \relpenalty*
suppress special spacing after punctuation. ..... \frenchspacing
enable special spacing after punctuation. ..... \nonfrenchspacing
hanging indentation changes after specified number of lines. ..... \hangafter*
extra space after subscript or superscript. ..... \scriptspace*
insert a token after the current group is completed. .... \aftergroup*
insert a token after the next assignment command. \afterassignment*
math symbol: aleph (ℵ). ..... \aleph
align a stack of equations. ..... \eqalign
numbers. align a stack of equations with equation .. \eqalignno
numbers. align a stack of equations with left equation \leqalignno
align zero or more columns. ..... \valign*
space between aligned tab entries. ..... \tabskip*
create an aligned table. ..... \halign*
create a multicolumn entry in an aligned table. ..... \span*
end a line in \halign aligned text. ..... \cr*

equivalent to \cr, end of aligned text. ..... \endline
display a stack of formulas without alignment. ..... \displaylines
special Plain TEX space used in alignment. ..... \hideskip
span several columns in an alignment. ..... \multispan
permit an alignment entry to stick out of its column. \hidewidth
suppress the template in the alignment preamble for this entry. ..... \omit*
allocate a new box register. ..... \newbox
allocate a new count register. ..... \newcount
allocate a new dimension register. ..... \newdimen
allocate a new input file. ..... \newread
allocate a new insert register. ..... \newinsert
allocate a new math skip register. ..... \newmuskip
allocate a new output file. ..... \newwrite
allocate a new skip register. ..... \newskip
allocate a new token register. ..... \newtoks
most recently allocated register number. ..... \allocationnumber
allow a line break. ..... \allowbreak
math Greek letter: alpha (α). ..... \alpha
set @ alphabetic to access internal commands. \makeatletterL
alternative to an \if. ..... \else*
test always false. ..... \iffalse*
test always succeeds. ..... \iftrue*
math operator: amalgamated sum, co-product ($\amalg$). ..... \amalg
vertical skip a large amount. ..... \bigskipL
vertical skip a medium amount. ..... \medskipL
vertical skip a small amount. ..... \smallskipL
a paragraph. amount added to badness of every line in \linepenalty*
fail to span included material. amount by which delimiters can \delimitershortfall*
split off a specified amount from a vbox. ..... \vsplit*
an index. amount of extra space between entries in \indexspaceL
amount of fil space in current page. \pagefilstretch*
amount of fill space in current page. \pagefillstretch*
amount of filll space in current page. \pagefilllstretch*
amount of glue shrinkage in current page. \pageshrink*
amount of glue stretch in current page. \pagestretch*
generate a short amount of verbatim text. ..... \verbL
an unoriented skip amount with stretch of 1fill. ..... \fillL
ampersand. ..... \&
math delimiter: left angle bracket ($\langle$). ..... \langle
math delimiter: right angle bracket ($\rangle$). ..... \rangle
angle symbol ($\angle$). ..... \angle
stack one equation above another. ..... \stackrelL
the following macro must not be called from another macro. ..... \outer*
current list. append a discretionary item to the .. \discretionary*
width of rules appended to overfull boxes. ..... \overfullrule*

set width of lines in picture environment. \linethickness L
width of marginal notes. ..... \marginparwidth L
width of printing on page. ..... \textwidth L
columns. width of rule separating double ..... \columnseprule L
boxes. width of rules appended to overfull ... \overfullrule *
set a length command to width of text. ..... \settowidth L
width of the current line. ..... \linewidth L
environment. half the width separating columns in a tabular .... \tabcolsep L
of characters before hyphenation at the start of a word. minimum number ... \lefthyphenposition 3
of characters after hyphenation at the end of a word. minimum number .. \righthyphenposition 3
word delimiter character. ..... \boundarychar 3
show hyphenations of given words. ..... \showhyphens
space between words. ..... \spaceskip *
define a symbol that will work properly in text and script sizes. . \mathpalette
math binary operator: wreath product ($\wr$). ..... \wr
terminate TEX and write a format file: INITEX only. ..... \dump *
write a glossary entry. ..... \glossary L
write a message on the terminal. ..... \typeout L
write a token list to a file. ..... \write *
terminal. write balanced error message to the ..... \errmessage *
write balanced text to terminal. ..... \message *
perform a \read or \write immediately. ..... \immediate *
character that starts a new output line in a write statement. ..... \newlinechar *
write to the log file only. ..... \wlog
suppress writing all auxiliary files. ..... \nofiles L

math Greek letter:	xi (ξ).	`\xi`
math Greek letter: capital	xi (Ξ).	`\Xi`
current month of the	year.	`\month`*
start an `\halign` with `\tabskip` initialized to	zero.	`\ialign`
create a formula with	zero height.	`\smash`
align	zero or more columns.	`\valign`*
create a	zero-height hbox with the width of a formula.	`\hphantom`
create a	zero-width box with text to the left.	`\llap`
create a	zero-width box with text to the right.	`\rlap`
create a	zero-width vbox the height and depth of a formula.	`\vphantom`
math Greek letter:	zeta (ζ).	`\zeta`

Chapter 3

Primitive and Plain TEX commands

This is a list of the TEX primitives and the Plain TEX commands. Primitives are marked with an asterisk. TEX version 3 commands are marked with a '3'.

*␣ space character.
~ unbreakable space.
*$ enter math mode.
*$$ enter display math mode.
% begin comment.
*& field separator in \halign or \valign.
*\␣ control space.
\! math mode negative thin space.
\# pound, hatch mark, sharp sign, octothorpe (#).
\$ dollar sign.
\% percent sign (%).
\& ampersand.
\' acute accent (é).
* math operator: discretionary multiply sign.
\+ begin a tabbed line in an outer environment.
\, thin space (math mode).
*\- discretionary hyphen.
\. dot accent (ẋ).
*\/ italic correction.
\; thick space (math mode).
\= macron or bar accent (ō).
\> medium space in math mode.
\{ open brace symbol.
\} close brace symbol.
\^ circumflex accent (ô).
_ underscore symbol.
\` grave accent (è).
\| math symbol: vertical bar (‖).
\~ tilde accent (ñ).
\" diæresis or umlaut accent (ẍ).
\aa symbol å.
\AA aymcol Å.

*\above fraction with rule thickness.
*\abovedisplayshortskip extra space above displays following short lines.
*\abovedisplayskip extra space above displays.
*\abovewithdelims fraction with specified rule and delimiters.
*\accent put an accent over the next character.
\active category code for active characters.
\acute math accent: acute ($\acute{x}$).
*\adjdemerits demerits for adjacent incompatible lines.
*\advance perform arithmetic on a register.
\advancepageno advance \pageno by one.
\ae ligature digraph symbol ae (æ).
\AE ligature digraph symbol capital AE (Æ).
*\afterassignment insert a token after the next assignment command.
*\aftergroup insert a token after the current group is completed.
\aleph math symbol: aleph ($\aleph$).
\allocationnumber most recently allocated register number.
\allowbreak allow a line break.
\alpha math Greek letter: alpha (α).
\amalg math operator: amalgamated sum, co-product ($\amalg$).
\angle angle symbol ($\angle$).
\approx math relation: approximately equal ($\approx$).
\arccos math function: arc cosine.
\arcsin math function: arc sine.
\arctan math function: arc tangent.
\arg math function: arg.
\arrowvert math symbol: vertical bar ($\arrowvert$).
\Arrowvert math symbol: double vertical bar ($\Arrowvert$).
\ast math operator: asterisk ($\ast$).

\asymp math relation: asymptote ($\asymp$).
*\atop fraction without rule.
*\atopwithdelims fraction without rule with given delimiters.
\b math accent: bar under ($\underline{x}$).
\backslash math delimiter: backslash ($\backslash$).
3\badness badness of a box.
\bar math accent: bar ($\bar{x}$).
*\baselineskip normal space between lines.
*\batchmode process input without displaying errors.
*\begingroup begin a group.
\beginsection mark the beginning of a major subdivision.
*\belowdisplayshortskip extra space just below displays following short lines.
*\belowdisplayskip extra space just below displays.
\beta math Greek letter: beta (β).
\bf select bold extended font.
\bffam bold font family.
\bgroup begin a group.
\big 1-line math delimiter size.
\Big 1.5-line math delimiter size.
\bigbreak large vertical space or a good page break.
\bigcap math operator: large cap ($\bigcap$).
\bigcirc math operator: large circle ($\bigcirc$).
\bigcup math operator: large cup ($\bigcup$).
\bigg 2-line math delimiter size.
\Bigg 2.5-line math delimiter size.
\biggl 2-line left math delimiter.
\Biggl 2.5-line left math delimiter.
\biggm 2-line middle math delimiter.
\Biggm 2.5-line middle math delimiter.
\biggr 2-line right math delimiter.
\Biggr 2.5-line right math delimiter.
\bigl 1-line left math delimiter.
\Bigl 1.5-line left math delimiter.
\bigm 1-line middle math delimiter.
\Bigm 1.5-line middle math delimiter.
\bigodot math operator: large circle with dot ($\bigodot$).
\bigoplus math operator: large circle with plus ($\bigoplus$).
\bigotimes math operator: large circle with times ($\bigotimes$).
\bigr 1-line right math delimiter.
\Bigr 1.5-line right math delimiter.
\bigskip large vertical break.
\bigskipamount \bigskip space.
\bigsqcup math operator: large square cup ($\bigsqcup$).
\bigtriangledown math operator: large down triangle ($\bigtriangledown$).
\bigtriangleup math operator: large up triangle ($\bigtriangleup$).
\biguplus math operator: large U plus ($\biguplus$).
\bigvee math join operator: large V ($\bigvee$).
\bigwedge math meet operator: large wedge ($\bigwedge$).
*\binoppenalty penalty for line break after binary operation.
\bmod math operator: binary modulo (mod).
\bordermatrix generate a matrix labeled on rows and columns.
\bot math symbol: bottom ($\bot$).
*\botmark mark text last encountered on page just boxed.
3\boundarychar word delimiter character.
\bowtie math relation: bowtie ($\bowtie$).
*\box use a box.
*\boxmaxdepth maximum depth of boxes on explicit pages.
\brace fraction without a rule with braces.
\braceld lower left piece of a horizontal brace.
\bracelu upper left piece of a horizontal brace.
\bracerd lower right piece of a horizontal brace.
\braceru upper right piece of a horizontal brace.
\bracevert piece of a vertical brace ($\Big\vert$).
\brack fraction without a rule with brackets.
\break force a line break.
\breve math accent: breve ($\breve{x}$).
*\brokenpenalty penalty if page break after hyphenated line.
\buildrel put symbols over math relations.
\bullet math operator: bullet ($\bullet$).
\bye finish processing input.
\c cedilla accent (ç).
\cal math mode calligraphic letters font.
\cap math operator: intersection or cap ($\cap$).
\cases generate a matrix with a left brace delimiter.
*\catcode set a character's processing category type.
\cdot math operator: centered dot ($\cdot$).
\cdotp centered dot with special spacing in math mode.
\cdots three centered dots in math mode ($\cdots$).
\centering internal Plain TEX space used for centering.
\centerline center text in a line.

*\char specify a character by its numeric code.
*\chardef define a name for a character.
\check math accent: check ($\check{x}$).
\chi math Greek letter: chi (χ).
\choose fraction without a rule with parentheses.
\circ math operator: circle ($\circ$).
*\cleaders surround a space with a repeated box or rule.
\cleartabs reset tabs.
*\closein close an input file.
*\closeout close an output file.
*\clubpenalty penalty if page break after first line of paragraph.
\clubsuit math symbol: club suit (♣).
\colon colon in a math formula.
\columns end a \settabs definition.
\cong math relation: congruent ($\cong$).
\coprod math operator: large co-product ($\coprod$).
*\copy use a copy of a box.
\copyright copyright symbol (©).
\cos math function: cosine.
\cosh math function: hyperbolic cosine.
\cot math function: cotangent.
\coth math function: hyperbolic cotangent.
*\count use a count register.
*\countdef define a name for a count register.
*\cr end a line in \halign aligned text.
*\crcr ensure a \cr in \halign.
\csc math function: cosecant.
*\csname begin expanding tokens to construct a command name.
\cup math operator: union or cup ($\cup$).
\d dot under accent ($\underset{\cdot}{x}$).
\dag dagger symbol (†).
\dagger math operator: dagger (†).
\dashv math relation: dash V ($\dashv$).
*\day current day of the month.
\ddag double dagger symbol (‡).
\ddagger math operator: double dagger (‡).
\ddot math accent: double dot ($\ddot{x}$).
\ddots three diagonal dots in math mode ($\ddots$).
*\deadcycles number of output routine calls since last \shipout.
*\def define a macro.
*\defaulthyphenchar default hyphen when a font is loaded.
*\defaultskewchar default horizontal kern character to position accents.
\deg math function: degree of a polynomial (deg).
*\delcode define a character as a delimiter.
*\delimiter define a delimiter for math mode.
*\delimiterfactor ratio for variable delimiters times 1000.
*\delimitershortfall amount by which delimiters can fail to span included material.
\delta math Greek letter: delta (δ).
\Delta math Greek letter: capital delta (Δ).
\det math function: det.
\diamond math operator: diamond ($\diamond$).
\diamondsuit math symbol: diamond suit ($\diamondsuit$).
\dim math function: dim.
*\dimen use a dimension register.
*\dimendef define a name for a dimension register.
*\discretionary append a discretionary item to the current list.
*\displayindent indentation of line for displayed equation.
*\displaylimits restore default limit placement on large math operators.
\displaylines display a stack of formulas without alignment.
*\displaystyle use normal math script style.
*\displaywidowpenalty penalty for creating a widow line before a display.
*\displaywidth width of a displayed equation.
\div math operator: div.
*\divide divide a register by a value.
\do redefinable scratch control sequence used by \dospecials.
\dospecials change the character code for a set of special characters.
\dosupereject flush insertions and eject to a new page.
\dot math accent: dot ($\dot{x}$).
\doteq math relation: dotted equal ($\doteq$).
\dotfill fill a space with dots.
\dots an ellipsis, equivalent to \ldots in math mode.
*\doublehyphendemerits demerits for consecutive broken lines.
\downarrow math symbol: down arrow ($\downarrow$).
\Downarrow math symbol: downward double arrow ($\Downarrow$).
\downbracefill fill a space with a downward brace.
*\dp depth of a box.
*\dump terminate TEX and write a format file: INITEX only.
*\edef define a macro with expanded replacement text.
\egroup end a group.

\eject force a page break.
\ell math symbol: small script L (ℓ).
*\else alternative to an \if.
3\emergencystretch extra space in badly-stretched lines.
\empty an empty list of tokens.
\emptyset math symbol: empty set ($\emptyset$).
*\end terminate TEX.
*\endcsname terminate a \csname token list.
\endgraf equivalent to \par.
*\endgroup end a group.
*\endinput stop reading current input file at the end of the current line.
\endinsert end of an insert.
\endline equivalent to \cr, end of aligned text.
*\endlinechar character placed at the right end of an input line.
\enskip breakable small horizontal skip.
\enspace unbreakable small horizontal space.
\epsilon math Greek letter: epsilon (ϵ).
\eqalign align a stack of equations.
\eqalignno align a stack of equations with equation numbers.
*\eqno equation number.
\equiv math relation: equivalence ($\equiv$).
*\errhelp help message to display if user asks for help.
*\errmessage write balanced error message to the terminal.
3\errorcontextlines number of lines of context to be displayed in an error message.
*\errorstopmode pause for normal errors while processing TEX input.
*\escapechar escape character in the output of control sequence tokens.
\eta math Greek letter: eta (η).
*\everycr tokens to insert after every \cr or nonredundant \crcr.
*\everydisplay tokens to insert when display math begins.
*\everyhbox tokens to insert when an hbox begins.
*\everyjob tokens to insert when the job begins.
*\everymath tokens to insert when math in text begins.
*\everypar tokens to insert when a paragraph begins.
*\everyvbox tokens to insert when a vbox begins.
*\exhyphenpenalty penalty for line break after explicit hyphen.
\exists math symbol: exists quantifier ($\exists$).
\exp math function: exp.
*\expandafter expand the token following the next token.
*\fam current family number.
*\fi end of an \if clause.
\filbreak break a page unless there is a better \filbreak below.
*\finalhyphendemerits demerits for a penultimate broken line.
*\firstmark mark text first encountered on page just boxed.
\fivebf 5 point boldface Roman font.
\fivei 5 point math italic font.
\fiverm 5 point Roman font.
\fivesy 5 point math symbol font.
\flat math symbol: flat ($\flat$).
*\floatingpenalty penalty for insertions that are split.
\fmtname name of current TEX format package.
\fmtversion version of current TEX format package.
\folio typeset page number.
*\font load a font.
*\fontdimen set a font-related parameter.
*\fontname gives the external file name for the given font.
\footins insertion class for footnote inserts.
\footline page foot line.
\footnote create a footnote.
\footnoterule define the rule separating a page and footnotes.
\footstrut ensure footnote line separation.
\forall math symbol: for-all quantifier ($\forall$).
\frenchspacing suppress special spacing after punctuation.
\frown math relation: frown ($\frown$).
*\futurelet assigns the second token to a control sequence and continues.
\gamma math Greek letter: gamma (γ).
\Gamma math Greek letter: capital gamma (Γ).
\gcd math function: gcd.
*\gdef define a macro globally.
\ge math relation: greater or equal ($\geq$).
\geq math relation: greater or equal ($\geq$).
\gets math relation: gets ($\leftarrow$).
\gg math relation: much greater ($\gg$).
*\global the following macro definition or register setting is global.
*\globaldefs override \global specifications.
\goodbreak good page break.
\grave math accent: grave ($\grave{x}$).
\H long Hungarian umlaut accent (ő).
*\halign create an aligned table.

\hang indent second and subsequent lines in a paragraph by \parindent.
*\hangafter hanging indentation changes after specified number of lines.
*\hangindent set hanging indentation.
\hat math accent: hat ($\hat{x}$).
*\hbadness limit for bad hbox errors.
\hbar math symbol: Planck's constant or h-bar ($\hbar$).
*\hbox create a box with horizontal mode material.
\headline page head line.
\heartsuit math symbol: heart suit ($\heartsuit$).
*\hfil infinitely stretchable horizontal space.
*\hfill more infinitely stretchable horizontal space.
*\hfilneg cancel infinitely stretchable horizontal space.
*\hfuzz maximum overrun before overfull hbox messages occur.
\hglue create some horizontal space.
\hideskip special Plain TEX space used in alignment.
\hidewidth permit an alignment entry to stick out of its column.
*\hoffset horizontal offset of a page.
\hom math function: hom.
\hookleftarrow math symbol: hook left arrow ($\hookleftarrow$).
\hookrightarrow math symbol: hook right arrow ($\hookrightarrow$).
\hphantom create a zero-height hbox with the width of a formula.
*\hrule produce a horizontal rule.
\hrulefill fill a space with a rule.
*\hsize width of a paragraph or \hbox.
*\hskip add horizontal space.
*\hss infinitely stretchable and shrinkable horizontal space.
*\ht height of a box.
*\hyphenation insert words into hyphenation dictionary.
*\hyphenchar hyphenation character for this font.
*\hyphenpenalty penalty for line break after discretionary hyphen.
\i dotless i letter ($\imath$).
\ialign start an \halign with \tabskip initialized to zero.
*\if compare two character codes.
*\ifcase select one of several entries determined by an integer.
*\ifcat test category codes.
*\ifdim test two dimensions.
*\ifeof test for end of file.
\iff math relation: if and only if ($\iff$).
*\iffalse test always false.
*\ifhbox test for a horizontal box.
*\ifhmode test for horizontal mode.
*\ifinner test for an internal mode.
*\ifmmode test for math mode.
*\ifnum test two integers.
*\ifodd test for odd integer.
*\iftrue test always succeeds.
*\ifvbox test for a vertical box.
*\ifvmode test for vertical mode.
*\ifvoid test for an empty box.
*\ifx compare tokens.
*\ignorespaces read, expand, then ignore tokens until a non-space is found.
\Im math symbol: imaginary, Fraktur I ($\Im$).
\imath math symbol: dotless i ($\imath$).
*\immediate perform a \read or \write immediately.
\in math relation: in ($\in$).
*\indent start a paragraph indented \parindent.
\inf math function: inf.
\infty math symbol: infinity (∞).
*\input read a file.
*\insert define where text will be inserted when the page is formatted.
*\insertpenalties sum of penalties for split insertions on the page.
\int math operator: integral ($\int$).
\interdisplaylinepenalty penalty for breaking between lines of a display.
\interfootnotelinepenalty penalty for breaking between lines of a footnote.
*\interlinepenalty additional penalty for page break between lines.
\iota math symbol: iota (ι).
\it select italic font.
\item display an item.
\itemitem display a sub-item.
\itfam italic font family.
\j dotless j letter ($\jmath$).
\jmath math symbol: dotless j ($\jmath$).
*\jobname name of the principal input file.
\joinrel internal Plain TEX command to piece together long arrows.
\jot unit of measure for opening up displays.
\kappa math Greek letter: kappa (κ).
\ker math function: ker.

*\kern kern a given distance.
\l Polish letter: slashed L (ł).
\L Polish letter: upper-case slashed L (Ł).
\lambda math Greek letter: lambda (λ).
\Lambda math Greek letter: capital lambda (Λ).
\land math operator: logical and ($\wedge$).
\langle math delimiter: left angle bracket ($\langle$).
3\language current language used for hyphenation.
*\lastbox fetch last box off the current list.
*\lastkern fetch last kern off the current list.
*\lastpenalty fetch last penalty off the current list.
*\lastskip fetch last skip off the current list.
\lbrace math delimiter: left curly brace ({).
\lbrack math delimiter: left bracket ([).
*\lccode lower-case code for a character.
\lceil math delimiter: left ceiling bracket ($\lceil$).
\ldotp lower dot math symbol with special spacing.
\ldots three low dots in math mode (...).
\le math relation: less or equal ($\leq$).
*\leaders fill a space with a repeated box or rule.
\leavevmode switch to horizontal mode from vertical mode.
*\left begin a new math list with a left delimiter.
\leftarrow math symbol: left arrow ($\leftarrow$).
\Leftarrow math symbol: left double arrow ($\Leftarrow$).
\leftarrowfill fill a space with a left arrow.
\leftharpoondown math symbol: left harpoon down ($\leftharpoondown$).
\leftharpoonup math symbol: left harpoon up ($\leftharpoonup$).
3\lefthyphenposition minimum number of characters before hyphenation at the start of a word.
\leftline flush text left on a line.
\leftrightarrow math symbol: left-right arrow ($\leftrightarrow$).
\Leftrightarrow math symbol: left-right double arrow ($\Leftrightarrow$).
*\leftskip space to the left of a paragraph.
\leq math relation: less or equal ($\leq$).
\leqalignno align a stack of equations with left equation numbers.
*\leqno left equation number.
*\let define a synonym for the current meaning of a control sequence.
\lfloor math delimiter: left floor bracket ($\lfloor$).
\lg math function: lg.
\lgroup math delimiter: left group ($\big($).
\lhook math symbol: left hook ($\lhook$).
\lim math function: lim.
\liminf math function: limit infimum ($liminf$).
*\limits place math limits above and below math operators.
\limsup math function: limit supremum ($limsup$).
\line create a box of current line width.
*\linepenalty amount added to badness of every line in a paragraph.
*\lineskip extra space between lines if \baselineskip isn't enough.
*\lineskiplimit minimum space between lines in a vertical list.
\ll math relation: much less ($\ll$).
\llap create a zero-width box with text to the left.
\lmoustache math symbol: left moustache ($\big\lmoustache$).
\ln math function: ln.
\lnot math operator: logical not, hook ($\neg$).
\log math function: log.
*\long the following macro may have multiple paragraphs as parameters.
\longleftarrow math symbol: long left arrow ($\longleftarrow$).
\Longleftarrow math symbol: long left double arrow ($\Longleftarrow$).
\longleftrightarrow math symbol: long left and right arrow ($\longleftrightarrow$).
\Longleftrightarrow math symbol: long left-right double arrow ($\Longleftrightarrow$).
\longmapsto math symbol: long maps to ($\longmapsto$).
\longrightarrow math symbol: long right arrow ($\longrightarrow$).
\Longrightarrow math symbol: long right double arrow ($\Longrightarrow$).
\loop begin a loop.
*\looseness force a change to the number of lines in a paragraph.
\lor math symbol: logical or ($\vee$).
*\lower lower a box a given distance.
*\lowercase translate balanced text to lower-case.
\lq math symbol: left quote (‘).
*\mag magnification ratio times 1000.
\magnification set the magnification for the document.
\magstep define font magnification.

\magstephalf use 11 point magnification.
\makefootline constructs a box with the page foot.
\makeheadline constructs a box with the page header.
\mapsto math symbol: maps to (↦).
\mapstochar math symbol: maps to char (↦).
*\mark place balanced text into a mark item on the current list.
*\mathaccent place an accent over the next math field.
*\mathbin define a binary math operator.
*\mathchar specify a math character code.
*\mathchardef define a name for a math character.
*\mathchoice choose a math formula based on the current style.
*\mathclose select math spacing of a closing delimiter for the next item.
*\mathcode set a math character's processing category type.
\mathhexbox internal Plain TEX operation to define math text symbols.
*\mathinner define an inner math subformula.
*\mathop define a large math operator.
*\mathopen select math spacing of an opening delimiter for the next item.
*\mathord define an ordinary math operator.
\mathpalette define a symbol that will work properly in text and script sizes.
*\mathpunct define a math punctuation operator.
*\mathrel define a math relation operator.
\mathstrut math strut with height and depth of parentheses.
*\mathsurround define kerning around math in text.
\matrix generate a matrix without delimiters.
\max math function: max.
*\maxdeadcycles upper bound on output routine calls.
*\maxdepth maximum depth of boxes on main pages.
\maxdimen largest permissible dimension.
*\meaning give a token list defining the semantics of a token.
\medbreak medium vertical space or a good page break.
*\medmuskip medium space in math formulas.
\medskip medium vertical space.
\medskipamount \medskip space.
*\message write balanced text to terminal.
\mid math relation: mid (|).
\midinsert insert at current position in page.
\min math function: min.
\mit math mode italic font.
*\mkern kern in math mode.
\models math relation: models (⊨).
*\month current month of the year.
*\moveleft add a box to the vertical list shifted left.
*\moveright add a box to the vertical list shifted right.
\mp math operator: minus plus (∓).
*\mskip insert horizontal space in math mode.
\mu math Greek letter: mu (μ).
*\multiply multiply a register by a value.
\multispan span several columns in an alignment.
*\muskip math skip register.
*\muskipdef define a name for a math skip register.
\nabla math symbol: nabla (∇).
\narrower increase left and right margins by \parindent.
\natural math symbol: natural (♮).
\ne math relation: not equal (≠).
\nearrow math symbol: northeast arrow (↗).
\neg math operator: negate (¬).
\negthinspace unbreakable tiny negative math mode horizontal space.
\neq math relation: not equal (≠).
\newbox allocate a new box register.
\newcount allocate a new count register.
\newdimen allocate a new dimension register.
\newfam define a new font family.
\newhelp define a new help message.
\newif define a new \if command.
\newinsert allocate a new insert register.
3\newlanguage define a new language to be used for hyphenation.
*\newlinechar character that starts a new output line in a write statement.
\newmuskip allocate a new math skip register.
\newread allocate a new input file.
\newskip allocate a new skip register.
\newtoks allocate a new token register.
\newwrite allocate a new output file.
\ni math relation: contains (∋).
*\noalign insert unaligned material in \halign or \valign.
\nobreak prohibit a line or page break.
*\noexpand suppress expansion of a character.
*\noindent start a paragraph without indentation.
\nointerlineskip suppress interline space before next vertical box.

*\nolimits place superscripts and subscripts after math operators.
\nonfrenchspacing enable special spacing after punctuation.
*\nonscript suppress space in script and small script styles.
*\nonstopmode process input without stopping for errors.
\nopagenumbers suppress page numbers.
\normalbaselines set line spacing to normal values.
\normalbaselineskip normal \baselineskip.
\normalbottom justify page bottoms to the same height.
\normallineskip value of normal \lineskip.
\normallineskiplimit value of normal \lineskiplimit.
\not math operator: not (/).
\not= math relation: not equal ($\neq$).
\notin math operator: not in ($\notin$).
\nu math Greek letter: nu (ν).
\null an empty hbox.
*\nulldelimiterspace width of a null delimiter.
*\nullfont a font with no characters.
*\number convert a number to a token string.
\nwarrow math symbol: northwest arrow ($\nwarrow$).
\o Norwegian letter: o with slash (ø).
\O Norwegian letter: capital O with slash (Ø).
\obeylines verbatim line breaks in input text.
\obeyspaces verbatim spaces in input text.
\odot math operator: circle dot ($\odot$).
\oe ligature digraph symbol oe (œ).
\OE ligature digraph symbol capital OE (Œ).
\offinterlineskip turn off extra space between lines.
\oint math operator: contour integral ($\oint$).
\oldstyle select old-style numerals with descenders.
\omega math Greek letter: omega (ω).
\Omega math Greek letter: capital omega (Ω).
\ominus math operator: circle minus ($\ominus$).
*\omit suppress the template in the alignment preamble for this entry.
*\openin open a file for input.
*\openout open a file for output.
\openup increase line separation in math mode.
\oplus math operator: direct sum, circle plus ($\oplus$).
*\or separate cases in an \ifcase.
\oslash math operator: circle slash ($\oslash$).
\otimes math operator: tensor product, circle times ($\otimes$).
*\outer the following macro must not be called from another macro.
*\output define the page output routine.
*\outputpenalty penalty at the current page break.
*\over fraction with a rule.
\overbrace horizontal brace over a math formula.
*\overfullrule width of rules appended to overfull boxes.
\overleftarrow left arrow over a math formula.
*\overline draw a line over a formula.
\overrightarrow right arrow over a math formula.
*\overwithdelims fraction with rule and given delimiters.
\owns math relation: owns ($\ni$).
\P math symbol: paragraph (¶).
\pagebody put page contents in a box of the proper height.
\pagecontents produce a vertical list of the body of a page.
*\pagedepth depth of the current page.
*\pagefilllstretch amount of filll space in current page.
*\pagefillstretch amount of fill space in current page.
*\pagefilstretch amount of fil space in current page.
*\pagegoal desired page height.
\pageinsert insert a whole page.
\pageno current page number.
*\pageshrink amount of glue shrinkage in current page.
*\pagestretch amount of glue stretch in current page.
*\pagetotal natural height of page so far.
*\par end a paragraph.
\parallel math relation: parallel ($\parallel$).
*\parfillskip space at the end of the last line of a paragraph.
*\parindent define paragraph indentation.
*\parshape define an unusual paragraph shape.
*\parskip define space between paragraphs.
\partial math symbol: partial (∂).
*\patterns define a set of hyphenation patterns.
*\pausing pause after each line is read from a file.
*\penalty specify penalty for a line or page break.
\perp math relation: perpendicular ($\perp$).

\phantom use the space taken by a formula.
\phi math Greek letter: phi (ϕ).
\Phi math Greek letter: capital phi (Φ).
\pi math Greek letter: pi (π).
\Pi math Greek letter: capital pi (Π).
\plainoutput default Plain output routine.
\pm math operator: plus or minus ($\pm$).
\pmatrix generate a matrix with parentheses delimiters.
\pmod math function: mod within parentheses ((mod)).
*\postdisplaypenalty penalty for page break just after a display.
\Pr math function: probability (Pr).
\prec math relation: precedes ($\prec$).
\preceq math relation: precedes or equal ($\preceq$).
*\predisplaypenalty penalty for page break just before a display.
*\predisplaysize length of text preceding a display.
\preloaded scratch control sequence used in preloading fonts.
*\pretolerance badness tolerance before hyphenation is attempted.
*\prevdepth depth of the last box on the vertical list.
*\prevgraf number of lines in the last paragraph.
\prime math symbol: prime (x').
\proclaim begin theorem with special format in math environment.
\prod math operator: large product ($\prod$).
\propto math relation: proportional to ($\propto$).
\psi math Greek letter: psi (ψ).
\Psi math Greek letter: capital psi (Ψ).
\qquad large breakable horizontal skip.
\quad breakable medium horizontal skip.
*\radical put a math field under a radical.
\raggedbottom suppress bottom justification of page text.
\raggedright suppress right justification of paragraph lines.
*\raise raise a box a given distance.
\rangle math delimiter: right angle bracket ($\rangle$).
\rbrace math delimiter: right curly brace ($\}$).
\rbrack math delimiter: right bracket (]).
\rceil math delimiter: right ceiling bracket ($\rceil$).
\Re math symbol: real, Fraktur R ($\Re$).
*\read read a line from a file.
*\relax do nothing.
\relbar math symbol: relation bar ($-$).
\Relbar math symbol: double relation bar ($=$).
*\relpenalty penalty for line break after math relation.
\removelastskip remove last skip on the list.
\repeat end of a \loop body.
\rfloor math delimiter: right floor ($\rfloor$).
\rgroup math delimiter: right group (⟯).
\rho math Greek letter: rho (ρ).
\rhook math symbol: right hook ($\hookrightarrow$).
*\right end a math list with a right delimiter.
\rightarrow math symbol: right arrow ($\rightarrow$).
\Rightarrow math symbol: right double arrow ($\Rightarrow$).
\rightarrowfill fill a space with a right arrow.
\rightharpoondown math symbol: right harpoon down ($\rightharpoondown$).
\rightharpoonup math symbol: right harpoon up ($\rightharpoonup$).
3\righthyphenposition minimum number of characters after hyphenation at the end of a word.
\rightleftharpoons math symbol: right left harpoon ($\rightleftharpoons$).
\rightline flush right text on a line.
*\rightskip space to the right of a paragraph.
\rlap create a zero-width box with text to the right.
\rm select Roman font.
\rmoustache math symbol: right moustache (⟭).
*\romannumeral convert a number to lower-case Roman numerals.
\root specified root of a formula.
\rq right quote (').
\S math symbol: section (§).
\sb subscript, equivalent to _ .
*\scriptfont select font for small math scripts.
*\scriptscriptfont select font for very small math scripts.
*\scriptscriptstyle use very small math script style.
*\scriptspace extra space after subscript or superscript.
*\scriptstyle use small math script style.
*\scrollmode process TEX input without pausing for normal errors.
\searrow math symbol: southeast arrow ($\searrow$).
\sec math function: secant.
*\setbox store an hbox or vbox in a box register.
3\setlanguage specify language to be used for hyphenation.
\setminus math operator: set minus ($\setminus$).
\settabs define horizontal tabs.

\sevenbf 7 point bold Roman font.
\seveni 7 point math italic font.
\sevenrm 7 point Roman font.
\sevensy 7 point math symbol font.
*\sfcode set a character's space factor.
\sharp math symbol: sharp (♯).
*\shipout send a box to the DVI file.
*\show show a token.
*\showbox show a box.
*\showboxbreadth maximum boxed items shown at a given depth.
*\showboxdepth maximum box depth shown.
\showhyphens show hyphenations of given words.
*\showlists show the current lists.
*\showthe display the contents of a register.
\sigma math Greek letter: sigma (σ).
\Sigma math Greek letter: capital sigma (Σ).
\sim math relation: similar ($\sim$).
\simeq math relation: similar or equal ($\simeq$).
\sin math function: sine.
\sinh math function: hyperbolic sine.
\skew shift super accents.
*\skewchar horizontal kern to position accents.
*\skip use a skip register.
*\skipdef define a name for a skip register.
\sl select slanted font.
\slash permit a line break after a slash.
\slfam slanted font family.
\smallbreak small vertical space and a good page break.
\smallint math operator: small integral ($\smallint$).
\smallskip small vertical space.
\smallskipamount \smallskip space.
\smash create a formula with zero height.
\smile math relation: smile ($\smile$).
\sp superscript, equivalent to ^.
\space a blank space.
*\spacefactor set a character's spacing factor.
*\spaceskip space between words.
\spadesuit math symbol: spade suit (♠).
*\span create a multicolumn entry in an aligned table.
*\special include balanced text in DVI file for post-processing.
*\splitbotmark mark text last encountered in a split box.
*\splitfirstmark mark text first encountered in a split box.
*\splitmaxdepth maximum depth of boxes in a split box.
*\splittopskip space at top of a split box.
\sqcap math operator: square cap ($\sqcap$).
\sqcup math operator: square cup ($\sqcup$).
\sqrt square root of a formula.
\sqsubseteq math relation: square subset or equal ($\sqsubseteq$).
\sqsupseteq math relation: square superset or equal ($\sqsupseteq$).
\ss German letter: sharp s (ß).
\star math operator: star ($\star$).
*\string expand a control sequence into character tokens.
\strut vertical strut to preserve line spacing.
\strutbox box containing a strut.
\subset math relation: subset ($\subset$).
\subseteq math relation: subset or equal ($\subseteq$).
\succ math relation: successor ($\succ$).
\succeq math relation: successor or equal ($\succeq$).
\sum math operator: large sum ($\sum$).
\sup math function: sup.
\supereject flush all insertions and eject to a new page.
\supset math relation: superset ($\supset$).
\supseteq math relation: superset or equal ($\supseteq$).
\surd math symbol: surd ($\surd$).
\swarrow math symbol: southwest arrow ($\swarrow$).
\t tie-after accent (o͡o).
\tabalign begin a tabbed line in an inner environment.
\tabs box containing current tabs.
*\tabskip space between aligned tab entries.
\tan math function: tangent.
\tanh math function: hyperbolic tangent.
\tau math Greek letter: tau (τ).
\tenbf 10 point bold font.
\tenex 10 point math extension symbol font.
\teni 10 point math italic font.
\tenit 10 point text italic font.
\tenrm 10 point Roman font.
\tensl 10 point slanted font.
\tensy 10 point math symbol font.
\tentt 10 point typewriter font.
\TeX "TEX" logo.
*\textfont select font for non-math text.
\textindent display an item without hanging indentation.
*\textstyle use in-text style for math.
*\the convert a numeric register to displayable form.
\theta math Greek letter: theta (θ).
\Theta math Greek letter: capital theta (Θ).
*\thickmuskip thick space in math formulas.
*\thinmuskip thin space in math formulas.
\thinspace unbreakable small horizontal space.
\tilde math accent: tilde ($\tilde{x}$).
*\time current time of day.

\times math operator: times ($\times$).
\to math relation: to ($\rightarrow$).
*\toks use a token list register.
*\toksdef define a name for a token list register.
*\tolerance badness tolerance after hyphenation.
\top math symbol: top ($\top$).
\topins insertion class for inserts at the top of a page.
\topinsert insert text at the top of the page.
*\topmark value of \botmark just before current page was boxed.
*\topskip space at the top of a page.
\tracingall turn on all debugging commands.
*\tracingcommands show commands before they are executed.
*\tracinglostchars show characters not in the font.
*\tracingmacros show macros as they are expanded.
*\tracingonline show diagnostics on the terminal.
*\tracingoutput show boxes that are shipped out.
*\tracingpages show page-break calculations.
*\tracingparagraphs show line-break calculations.
*\tracingrestores show unassignments when groups end.
*\tracingstats show statistics about memory usage.
\triangle math symbol: triangle ($\triangle$).
\triangleleft math operator: left triangle ($\triangleleft$).
\triangleright math operator: right triangle ($\triangleright$).
\tt select typewriter font.
\ttfam typewriter font family.
\ttraggedright suppress right justification of typewriter font lines.
\u breve accent ($\breve{x}$).
*\uccode upper-case code for a character.
*\uchyph positive if hyphenating words beginning with capital letters.
\undefined an undefined control sequence.
\underbar create a box with an underline.
\underbrace horizontal brace under a math formula.
*\underline draw a line under a formula.
*\unhbox un-box an hbox and add it to the horizontal list.
*\unhcopy un-box a copy of an hbox and add it to the horizontal list.
*\unkern remove a kern just added to the current list.
*\unpenalty remove a penalty just added to the current list.
*\unskip remove a skip just added to the current list.
*\unvbox un-box a vbox and add it to the vertical list.
*\unvcopy un-box a copy of a vbox and add it to the vertical list.
\uparrow math delimiter: upward arrow ($\uparrow$).
\Uparrow math symbol: upward double arrow ($\Uparrow$).
\upbracefill fill a space with an upward brace.
\updownarrow math delimiter: up-and-down arrow ($\updownarrow$).
\Updownarrow math symbol: up-and-down double arrow ($\Updownarrow$).
\uplus math operator: U plus ($\uplus$).
*\uppercase translate balanced text to upper-case.
\upsilon math Greek letter: upsilon (υ).
\Upsilon math Greek letter: capital upsilon (Υ).
\v check accent ($\check{x}$).
*\vadjust insert vertical material into a paragraph.
*\valign align zero or more columns.
\varepsilon math Greek letter: variant epsilon (ε).
\varphi math Greek letter: variant phi (φ).
\varpi math Greek letter: variant pi (ϖ).
\varrho math Greek letter: variant rho (ϱ).
\varsigma math Greek letter: variant sigma (ς).
\vartheta math Greek letter: variant theta (ϑ).
*\vbadness limit for bad vbox errors.
*\vbox create a box with vertical mode material.
*\vcenter create a centered vbox in a math list.
\vdash math relation: dash ($\vdash$).
\vdots math symbol: vertical dots ($\vdots$).
\vec math accent: vector ($\vec{x}$).
\vee math binary operator: join or V ($\vee$).
\vert math delimiter: vertical bar ($|$).
\Vert math delimiter: double vertical bar ($\|$).
*\vfil infinitely stretchable vertical space.
*\vfill more infinitely stretchable vertical space.
*\vfilneg cancel infinitely stretchable vertical space.
\vfootnote place a footnote in a caption or other vertical list.
*\vfuzz maximum overrun before overfull vbox error.

`\vglue` create some vertical space.
*`\voffset` vertical offset of a page.
`\vphantom` create a zero-width vbox the height and depth of a formula.
*`\vrule` produce a vertical rule.
*`\vsize` height of text on a page or `\vbox`.
*`\vskip` add vertical space.
*`\vsplit` split off a specified amount from a vbox.
*`\vss` infinitely stretchable and shrinkable vertical space.
*`\vtop` create a box with vertical mode material with the baseline at the top.
*`\wd` width of a box.
`\wedge` math binary operator: meet or wedge ($\wedge$).
`\widehat` math accent: wide hat ($\widehat{x}$).
`\widetilde` math accent: wide tilde ($\widetilde{x}$).
*`\widowpenalty` penalty for creating a widow line at top of page.
`\wlog` write to the log file only.
`\wp` math symbol: Weierstrass p ($\wp$).
`\wr` math binary operator: wreath product ($\wr$).
*`\write` write a token list to a file.
*`\xdef` define a global macro with expanded replacement text.
`\xi` math Greek letter: xi (ξ).
`\Xi` math Greek letter: capital xi (Ξ).
*`\xleaders` fill a space with an evenly distributed box or rule.
*`\xspaceskip` space between sentences.
*`\year` current year of our Lord.
`\zeta` math Greek letter: zeta (ζ).

Number of TEX primitives and commands: 864.

Chapter 4

LaTeX Commands

\' put text flush right in a column in tabbing environment.
\(begin math mode.
\) end math mode.
\- unindents left margin one tab stop in tabbing environment.
\: medium space in math mode.
\< cancel effect of one \+ command in tabbing environment.
\= define a tab stop in tabbing environment.
\> move to next tab position in tabbing environment.
\@ create end-of-sentence space after following punctuation.
\[begin display math mode.
\\ force a line break in a paragraph.
\] end display math mode.
\+ indents left margin one tab stop in tabbing environment.
\@@par TeX primitive \par.
\@beginparpenalty penalty at the beginning of a list.
\@endparpenalty penalty at the end of a list.
\@hangfrom hanging indent of a paragraph.
\@ifnextchar test the next character.
\@itempenalty penalty between list items.
\a produce TeX accents in tabbing environment.
\addcontentsline adds an entry to the specified list or table.
\addtocontents add text to table contents, figures, or tables.
\addtocounter increment a counter.
\addtolength increment the value of a length command.
\addvspace add extra vertical space.
\alph display counter as lower-case letter.
\Alph display counter as upper-case letter.
\and additional authors on title page.
\appendix set sectional units to appendix style.
\arabic display counter as Arabic numerals.
\array begin array environment.
\arraycolsep column separation in array environment.
\arrayrulewidth set width of array rules.
\arraystretch space between rows of array or tabular environment.
\author title page author.
\baselinestretch multiple of normal \baselineskip.
\begin beginning of an environment.
\bf bold font style.
\bibitem create a bibliography entry.
\bibliography enable BibTeX bibliography interface.
\bibliographystyle specify bibliographic style for BibTeX.
\big big font size.
\Big bigger font size.
\BIG biggest font size.
\bigskip vertical skip a large amount.
\boldmath select bold math italic and symbol fonts.
\botfigrule place rule between text and bottom floats.
\bottomfraction fraction of column for bottom floats.
\Box math symbol: box (□).
\caption produce a numbered caption.
\center begin centering environment.
\centering declaration to center lines.
\chapter start a chapter.
\circle circle in a picture environment.
\cite generate an in-text citation of a reference.
\cleardoublepage flush figures and tables and start a new right-hand page.

`\clearpage` flush figures and start a new page.
`\cline` multicolumn line in array or tabular environment.
`\columnsep` space between columns in double column text.
`\columnseprule` width of rule separating double columns.
`\columnwidth` width of a column.
`\dashbox` create a box in dashes, with positioning.
`\date` date on title page.
`\dblfigrule` rule between double-column floats and text.
`\dblfloatpagefraction` size of float on double-column page.
`\dblfloatsep` space between double-column floats.
`\dbltextfloatsep` space between double-column floats and text.
`\dbltopfraction` fraction of two-column page for top floats.
`\Diamond` math symbol: diamond ($\diamond$).
`\document` read in the .AUX files and disable alpha `@` processing.
`\documentstyle` declare document style and options.
`\doublerulesep` double rule separation in array or tabular environment.
`\egtit` 8 point italic font.
`\egtly` 8 point LaTeX symbol font.
`\egtmi` 8 point math italic font.
`\egtrm` 8 point Roman font.
`\egtsy` 8 point math symbol font.
`\elvbf` 11 point bold extended font.
`\elvit` 11 point italic font.
`\elvly` 11 point LaTeX symbol font.
`\elvmi` 11 point math italic font.
`\elvrm` 11 point Roman font.
`\elvsf` 11 point sans serif font.
`\elvsl` 11 point slanted font.
`\elvsy` 11 point math symbol font.
`\elvtt` 11 point typewriter font.
`\em` emphasis font.
`\end` end of an environment.
`\endarray` end array environment.
`\endcenter` end centering environment.
`\endequation` end an equation.
`\endfigure` end a floating figure.
`\endflushleft` end flush left environment.
`\endflushright` end flush right environment.
`\endpicture` end picture environment.
`\endthebibliography` end bibliography environment.
`\equation` begin and cross reference an equation.
`\evensidemargin` left hand margin on even pages.
`\extracolsep` add extra space before a column in array or tabular environment.
`\fbox` create and frame a box.
`\fboxrule` thickness of rule surrounding framed box.
`\fboxsep` space between a box and its contents in `\fbox` and `\framebox`.
`\figure` begin a floating figure.
`\fill` an unoriented skip amount with stretch of `1fill`.
`\fivly` 5 point LaTeX symbol font.
`\fivmi` 5 point math italic font.
`\fivrm` 5 point Roman font.
`\fivsy` 5 point math symbol font.
`\floatpagefraction` portion of page that may be occupied by floats.
`\floatsep` space between floats.
`\flushbottom` justify page bottoms to the same height.
`\flushleft` begin flush left environment.
`\flushright` begin flush right environment.
`\fnsymbol` display counter as footnote symbol.
`\footheight` height of page footer.
`\footins` space between main text and footnotes.
`\footnotemark` insert a footnote mark without text.
`\footnoterule` macro to draw the rule separating footnotes from text.
`\footnotesep` footnote separation distance.
`\footnotesize` select footnote font size.
`\footnotetext` produce footnote text without a mark.
`\footskip` space between text and page footer.
`\frac` generate a fraction.
`\frame` put a frame around some text.
`\framebox` create and frame a box, with positioning.
`\frtnbf` 14 point bold extended font.
`\frtnly` 14 point LaTeX symbol font.
`\frtnmi` 14 point math italic font.
`\frtnrm` 14 point Roman font.
`\frtnsy` 14 point math symbol font.
`\fussy` require strict line and page breaks.
`\glossary` write a glossary entry.
`\headheight` height of page header.
`\headsep` space between page header and text.
`\hline` horizontal line in array and tabular environments.
`\hspace` skip horizontal space.

`\huge` select font four steps larger than normal size.
`\Huge` select largest available font.
`\include` read a file unless disabled by `\includeonly`.
`\includeonly` enable only specific `\include` commands.
`\index` create an index entry.
`\indexentry` en entry in a file of index terms.
`\indexspace` amount of extra space between entries in an index.
`\interfootnotelinepenalty` interline penalty for footnotes.
`\intextsep` vertical space around a float in the middle of a page.
`\item` start an entry in a list environment.
`\itemindent` indent before the label in a list environment.
`\itemsep` space between successive items in a list environment.
`\Join` math symbol: join ($\bowtie$).
`\kill` discard current line in tabbing environment.
`\label` define a cross reference label.
`\labelitemi` mark denoting first-level items.
`\labelitemii` mark denoting second-level items.
`\labelitemiii` mark denoting third-level items.
`\labelitemiv` mark denoting fourth-level items.
`\labelitemv` mark denoting fifth-level items.
`\labelitemvi` mark denoting sixth-level items.
`\labelsep` space between a label and text of a list item.
`\labelwidth` label width in a list environment.
`\large` select font one step larger than normal size.
`\Large` select font two steps larger than normal size.
`\LARGE` select font three steps larger than normal size.
`\LaTeX` LaTeX logo.
`\leadsto` math symbol: leads to ($\rightsquigarrow$).
`\lefteqn` set a formula flush left in display style.
`\leftmargin` left margin of a list environment.
`\leftmargini` width of left margin in first-level list.
`\leftmarginii` width of left margin in second-level list.
`\leftmarginiii` width of left margin in third-level list.
`\leftmarginiv` width of left margin in fourth-level list.
`\leftmarginv` width of left margin in fifth-level list.
`\leftmarginvi` width of left margin in sixth-level list.
`\leftmark` produces current left page heading.
`\lhd` math symbol: left half diamond ($\lhd$).
`\line` line in a picture environment.
`\linebreak` encourage a line break.
`\linethickness` set width of lines in picture environment.
`\linewidth` width of the current line.
`\listoffigures` generate a list of figures.
`\listoftables` generate a list of tables.
`\listparindent` indent second and subsequent paragraphs in a list environment.
`\load` load a font.
`\makeatletter` set `@` alphabetic to access internal commands.
`\makeatother` set `@` non-alphabetic to hide internal commands.
`\makebox` create a box, with positioning.
`\makeglossary` enable glossary processing.
`\makeindex` enable index creation.
`\makelabel` create item label for a list environment.
`\maketitle` produce the title.
`\marginpar` produce a marginal note.
`\marginparpush` vertical space between marginal notes.
`\marginparsep` distance between marginal note and text.
`\marginparwidth` width of marginal notes.
`\markboth` set headings for left and right pages.
`\markright` set heading for right pages.
`\mathindent` indentation of display equations.
`\mbox` create a box.
`\medskip` vertical skip a medium amount.
`\mho` math symbol: mho ($\mho$).
`\minipage` create a small sample page.
`\multicolumn` multicolumn entry in array or tabular environment.
`\multiput` place several copies of a picture object.
`\newcommand` define a new command.
`\newcounter` define a new counter variable.
`\newenvironment` define a new environment.
`\newfont` select a font.
`\newlength` define a new length command.
`\newline` force a line break in a paragraph.
`\newpage` start a new page.
`\newsavebox` define a new box register.
`\newtheorem` define a new theorem environment.
`\ninbf` 9 point bold extended font.
`\ninit` 9 point italic font.
`\ninly` 9 point LaTeX symbol font.

`\ninmi` 9 point math italic font.
`\ninrm` 9 point Roman font.
`\ninsy` 9 point math symbol font.
`\nintt` 9 point typewriter font.
`\nocite` reference a BibTeX item without citation.
`\nofiles` suppress writing all auxiliary files.
`\nolinebreak` suppress a line break.
`\nonumber` suppress numbering of displayed equations.
`\nopagebreak` suppress a page break.
`\normalmarginpar` put marginal notes on default side of page.
`\normalsize` select normal font size.
`\numberline` includes the section number in a `\contentsline` command.
`\obeycr` defines a carriage return as `\\`.
`\oddsidemargin` left hand margin on odd pages.
`\onecolumn` start a new page in single-column format.
`\oval` oval in a picture environment.
`\pagebreak` encourage a page break.
`\pagenumbering` specify page numbering style.
`\pageref` page number of a cross reference label.
`\pagestyle` set global page style.
`\paragraph` start a labeled paragraph.
`\parbox` put a paragraph in a box.
`\parsep` space between paragraphs within an item in a list environment.
`\part` start a major division of a long document.
`\partopsep` extra vertical space when environment starts a paragraph.
`\picture` begin picture environment.
`\poptabs` restore tabs stops in tabbing environment.
`\pounds` British pound symbol (£).
`\protect` protect fragile commands and moving arguments.
`\pushtabs` save current tab stops in tabbing environment.
`\put` place a picture object.
`\raggedbottom` justify page bottoms to their natural height.
`\raggedleft` flush lines right.
`\raggedright` flush lines left.
`\raisebox` raise a box a distance.
`\ref` refer to a cross reference label.
`\refstepcounter` increment and reference a counter.
`\renewcommand` redefine a command.
`\renewenvironment` redefine an environment.
`\restorecr` restores a carriage return to its usual meaning.
`\reversemarginpar` put marginal notes on opposite side of page.
`\rhd` math symbol: right half diamond (▷).
`\rightmargin` right margin in a list.
`\rightmark` produces current right page heading.
`\roman` display counter as lower-case Roman numerals.
`\Roman` display counter as upper-case Roman numerals.
`\rule` create a rule or line.
`\samepage` inhibit a page break over a region.
`\savebox` create and name a box, with positioning.
`\sbox` create and name a box.
`\sc` select small caps font.
`\scriptscriptsize` select sub-subscript font size.
`\scriptsize` select subscript or superscript font size.
`\section` start a section.
`\setcounter` set value of a counter.
`\setlength` set a length command.
`\settowidth` set a length command to width of text.
`\sevit` 7 point italic font.
`\sevly` 7 point LaTeX symbol font.
`\sevmi` 7 point math italic font.
`\sevrm` 7 point Roman font.
`\sevsy` 7 point math symbol font.
`\sf` select sans serif font.
`\shortstack` create a box with a single column of items.
`\showoutput` trace output processing.
`\sixly` 6 point LaTeX symbol font.
`\sixmi` 6 point math italic font.
`\sixrm` 6 point Roman font.
`\sixsy` 6 point math symbol font.
`\sloppy` accept looser line and page breaks.
`\small` select small font size.
`\smallskip` vertical skip a small amount.
`\sqsubset` math symbol: square subset (⊏).
`\sqsupset` math symbol: square superset (⊐).
`\stackrel` stack one equation above another.
`\stepcounter` increment a counter.
`\stop` terminate LaTeX and flush the final page.
`\stretch` infinitely stretchable space.
`\subitem` second-level item in an index.
`\subparagraph` start a labeled sub-level paragraph.
`\subsection` start a subsection.
`\subsubitem` third-level item in an index.

\subsubsection start a subsubsection.
\svtnbf 17 point bold extended font.
\svtnly 17 point LaTeX symbol font.
\svtnmi 17 point math italic font.
\svtnrm 17 point Roman font.
\svtnsy 17 point math symbol font.
\symbol display a symbol from a font.
\tabbingsep distance left by \' command between tabbing fields.
\tabcolsep half the width separating columns in a tabular environment.
\tableofcontents generate a table of contents.
\tencirc 10 point circle font.
\tencircw 10 point wide circle font.
\tenln 10 point line font.
\tenlnw 10 point wide line font.
\tenly 10 point LaTeX symbol font.
\tenmi 10 point math italic font.
\tensf 10 point sans serif font.
\textfloatsep space between floats and the text.
\textfraction size of column that must contain text.
\textheight height of text, excluding head and foot.
\textwidth width of printing on page.
\thanks add footnote to title page.
\theenumi current value of the first-level item counter.
\theenumii current value of the second-level item counter.
\theenumiii current value of the third-level item counter.
\theenumiv current value of the fourth-level item counter.
\theenumv current value of the fifth-level item counter.
\theenumvi current value of the sixth-level item counter.
\theequation number of the current displayed equation.
\thefigure current value of the figure counter.
\thefootnote produces the footnote number.
\thepage current page number.
\thicklines thick lines for lines and circles.
\thinlines thin lines for lines and circles.
\thispagestyle set current page style.
\tiny select smallest defined font.
\title declare the title.
\today display today's date.
\topfigrule place rule between top floats and text.
\topfraction fraction of column for top floats.
\topmargin extra space added to top of page.
\topsep space between first list item and preceding paragraph.
\twlbf 12 point bold extended font.
\twlit 12 point italic font.
\twlly 12 point LaTeX symbol font.
\twlmi 12 point math italic font.
\twlrm 12 point Roman font.
\twlsf 12 point sans serif font.
\twlsl 12 point slanted font.
\twlsy 12 point math symbol font.
\twltt 12 point typewriter font.
\twocolumn start a new page in double-column format.
\twtybf 20 point bold extended font.
\twtyly 20 point LaTeX symbol font.
\twtymi 20 point math italic font.
\twtyrm 20 point Roman font.
\twtysy 20 point math symbol font.
\typein execute a command from the terminal.
\typeout write a message on the terminal.
\unboldmath unselect bold math italic and symbol fonts.
\underline create an underlined box with text in it.
\unitlength unit of distance in picture environment.
\unlhd math symbol: underlined left half diamond ($\trianglelefteq$).
\unrhd math symbol: underlined right half diamond ($\trianglerighteq$).
\usebox use a named box.
\usecounter associate a counter with an item-type command.
\value produce the value of a counter.
\vector vector in a picture environment.
\verb generate a short amount of verbatim text.
\vline vertical line in array and tabular environments.
\vspace skip vertical space.

Number of LaTeX commands: 367.
